Araldite Ly 564 Aradur 22962 Parscomposite The Ultimate Guide to Araldite LY 564 Aradur 22962 and ParsComposite Systems This comprehensive guide explores the use of Araldite LY 564 epoxy resin Aradur 22962 hardener and their application within ParsComposite systems We will cover everything from mixing ratios and curing times to best practices and troubleshooting common issues This information is intended for experienced composite workers always consult the manufacturers Safety Data Sheets SDS and technical data sheets before working with these materials

I Understanding the Components Araldite LY 564 This is a bisphenolA based epoxy resin known for its excellent mechanical properties chemical resistance and good adhesion to various substrates Its often chosen for highperformance composite applications due to its strength and durability Aradur 22962 This is a cycloaliphatic amine hardener specifically designed to work with Araldite LY 564 It contributes to the final cured materials properties influencing its viscosity pot life and curing time The combination of LY 564 and 22962 offers a good balance of mechanical strength and thermal stability ParsComposite Systems This refers to the broader application within composite manufacturing processes These systems utilize LY 564 and 22962 within fiberglass carbon fiber or other reinforcement materials to create strong lightweight components This could range from small parts to large structural elements

II Mixing Ratios and Pot Life The correct mixing ratio is crucial for achieving optimal performance The standard ratio for Araldite LY 564 and Aradur 22962 is usually 100:30 by weight This means for every 100 grams of LY 564 resin you should add 30 grams of 22962 hardener Always weigh the components accurately using a calibrated scale Using a volumebased measurement is not recommended due to variations in density Once mixed the mixture possesses a limited pot life the time before the mixture begins to thicken and become unusable The pot life for LY 564:22962 is temperaturedependent warmer temperatures shorten the pot life Generally its around 30-60 minutes at room temperature 20-25°C Plan your work accordingly

III StepbyStep Application Lets assume youre creating a simple fiberglass laminate 1

Preparation Thoroughly clean and prepare the mold or substrate Remove any dust grease or contaminants that might affect adhesion 2 Mixing Accurately weigh the LY 564 and 22962 using a calibrated scale according to the recommended ratio Thoroughly mix the components using a lowspeed mixer for at least 23 minutes ensuring no streaks of unmixed resin remain Avoid introducing air bubbles as much as possible 3 Layup Apply a thin layer of resin to the mold surface Carefully place the fiberglass cloth or other reinforcement material onto the resin ensuring complete saturation Use a roller or brush to remove air bubbles and ensure proper resin distribution Repeat this layering process until the desired thickness is achieved 4 Curing Allow the composite part to cure at the specified temperature and time according to the manufacturers instructions The curing process is exothermic meaning it generates heat Monitoring the temperature is important especially for large parts to prevent overheating and potential defects Typical cure cycles range from room temperature curing over several days to accelerated curing in an oven at elevated temperatures 5 PostCuring Postcuring at a slightly elevated temperature can further improve the materials properties enhancing strength and chemical resistance IV Best Practices Use appropriate Personal Protective Equipment PPE This includes gloves eye protection and respiratory protection Epoxy resins and hardeners can be irritating to the skin and respiratory system Work in a wellventilated area The curing process releases volatile organic compounds VOCs Control the temperature Temperature significantly affects pot life and curing time Monitor temperatures during both mixing and curing Use clean equipment Contaminated equipment can introduce impurities that negatively affect the final product Proper surface preparation Achieving good adhesion depends on a clean and properly prepared surface 3 Accurate mixing Inconsistent mixing can lead to weak spots and premature failure Avoid excessive pressure During the layup process avoid applying excessive pressure which can squeeze out resin and weaken the laminate V Common Pitfalls to Avoid Incorrect mixing ratio Deviation from the recommended ratio can significantly affect the cured materials properties leading to weakness and reduced performance Insufficient mixing Poor mixing results in uneven curing causing weak spots and potential failure Air entrapment Air bubbles weaken the composite structure Proper techniques like vacuum bagging or pressure rolling can help minimize this Temperature fluctuations Significant temperature

changes during curing can compromise the final product Improper surface preparation Poor surface preparation leads to poor adhesion and delamination Overheating during curing Excessive heat can cause cracking and degradation of the material Using expired materials Expired materials may not perform as expected and may not cure properly VI Troubleshooting If you encounter problems such as incomplete curing poor adhesion or excessive porosity reexamine each step of the process Check for errors in mixing temperature control or surface preparation Consult the manufacturers technical data sheet for more detailed troubleshooting guidance VII Araldite LY 564 and Aradur 22962 offer a versatile and highperformance epoxy system suitable for various composite applications Understanding the correct mixing ratio pot life and curing parameters is crucial for achieving optimal results Following best practices including proper PPE usage and careful attention to detail will lead to strong durable and reliable composite structures VIII FAQs 1 Can I use a different hardener with Araldite LY 564 No using a different hardener than the recommended Aradur 22962 will likely result in unpredictable curing behavior and inferior mechanical properties Always follow the manufacturers recommendations 4 2 How long does it take for LY 564/22962 to fully cure The curing time depends on the temperature and thickness of the laminate Check the manufacturers technical data sheet for specific curing schedules Room temperature curing can take several days while oven curing at elevated temperatures may significantly reduce curing time 3 What is the shelf life of Araldite LY 564 and Aradur 22962 The shelf life is typically indicated on the product packaging Proper storage in a cool dry place is essential to maintain the quality of the materials 4 What happens if I use too much hardener Using too much hardener can lead to excessive heat generation during curing potentially causing cracking and degradation of the cured material It may also result in brittleness and reduced flexibility 5 Can I repair a cured LY 564/22962 composite part Repair is possible but challenging It often requires careful surface preparation using a compatible epoxy system and ensuring proper adhesion to the existing cured part Consult the manufacturers recommendations for suitable repair materials and techniques
